Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "I want to know where my money is going." • "I need an easy way to track my expenses." • "I want to stay within my monthly budget."		THINKS • "Am I spending too much on unnecessary things?" • "How can I save more money each month?" • "I need simple financial insights."
	PERSONA College Student (Role / User Type)	
DOES • Records or checks daily expenses. • Reviews spending before making purchases. • Tries to plan a monthly budget and savings.		FEELS • Confused when expenses are not organized. • Concerned about overspending. • Motivated to improve saving habits.

Empathy Focus: PocketSmart AI should make expense tracking and budgeting simple, clear, and less stressful for college students.
