Project Proposal (Proposed Solution) report

The proposal presents PocketSmart AI as a student-focused personal finance assistant. It aims to make everyday money management simpler by combining expense tracking, budgeting, spending analysis and AI-assisted recommendations in a single system.

Project Overview

Section	Description
Objective	Help students manage personal finances by making expense tracking, budgeting and spending analysis simple, understandable and actionable.
Scope	A student-focused personal finance assistant that records income and expenses, organizes spending, monitors budgets, provides alerts and generates AI-assisted saving insights.

Problem Statement

Section	Description
Description	Students may find it difficult to track daily spending, control unplanned purchases and understand where their monthly money is going.
Impact	Poor visibility of spending can make budgeting difficult and may reduce the user's ability to plan savings and control unnecessary expenses.

Proposed Solution

Section	Description
Approach	PocketSmart AI combines expense tracking, budget monitoring, data analysis and AI-assisted recommendations in one simple interface.
Key Features	- Expense and income entry - Category-wise spending analysis - Monthly budget setting and tracking - Budget alerts and spending insights - AI-generated saving suggestions - Dashboard with charts and summaries
Decision / Insight Flow	User enters financial data → system validates and stores it → spending is analysed → AI generates contextual insights → dashboard presents alerts, trends and saving suggestions.

Resource Requirements

Resource Type	Description	Specification / Allocation
Hardware	Computing Resources	Standard development system; cloud/API resources may be used for AI processing
Hardware	Memory	Minimum 4 GB; 8 GB recommended
Hardware	Storage	At least 10 GB development storage
Software	Frontend	Responsive web interface
Software	Backend	Application logic and REST API
Software	Database	Users, expenses, income, budgets and records
Software	AI Service	AI-assisted financial insights and saving suggestions
Software	Libraries / Tools	Data analysis, visualization, version control and development

Proposed Solution Summary

PocketSmart AI follows the same proposal structure as the supplied reference: objective, scope, problem statement, impact, proposed approach, key features and resource requirements. The reference document uses this structure for its proposed-solution report.

[filecite\turn7file0\L8-L32](#)

The supplied reference also organizes resources into hardware, software and data/resource requirements. The PocketSmart AI version adapts those categories to the project's proposed application rather than copying the loan-approval project's resources.
