

Performance Testing

Date	29 September 2026
Team ID	SWTID-2026-2087
Project Name	POCKET SMART AI
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman + k6 (planned)
Type of Testing	Load Testing + stress Testing
Target Module / API	Login, budget, expense and AI insight API flow
Test Environment	Local / Hosted test server
Test Date	29 September 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Baseline normal user flow	10	60	Stable response; no errors
2	Dashboard + expense load	25	120	Response time within target
3	Stress with concurrent requests	50	120	No crash; graceful handling
4	Peak / spike traffic	100	60	Service remains available

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	To be measured		Pass	Run baseline test
2	Response Time (Max)	To be measured		Pass	Run max-load test
3	Throughput (Req/sec)	To be measured		Pass	Record req/sec
4	Error Rate	To be measured		Pass	Target below 1%
5	CPU Utilization	To be measured		Pass	Monitor during test
6	Memory Utilization	To be measured		Pass	Monitor during test

Step 4: Observations & Analysis

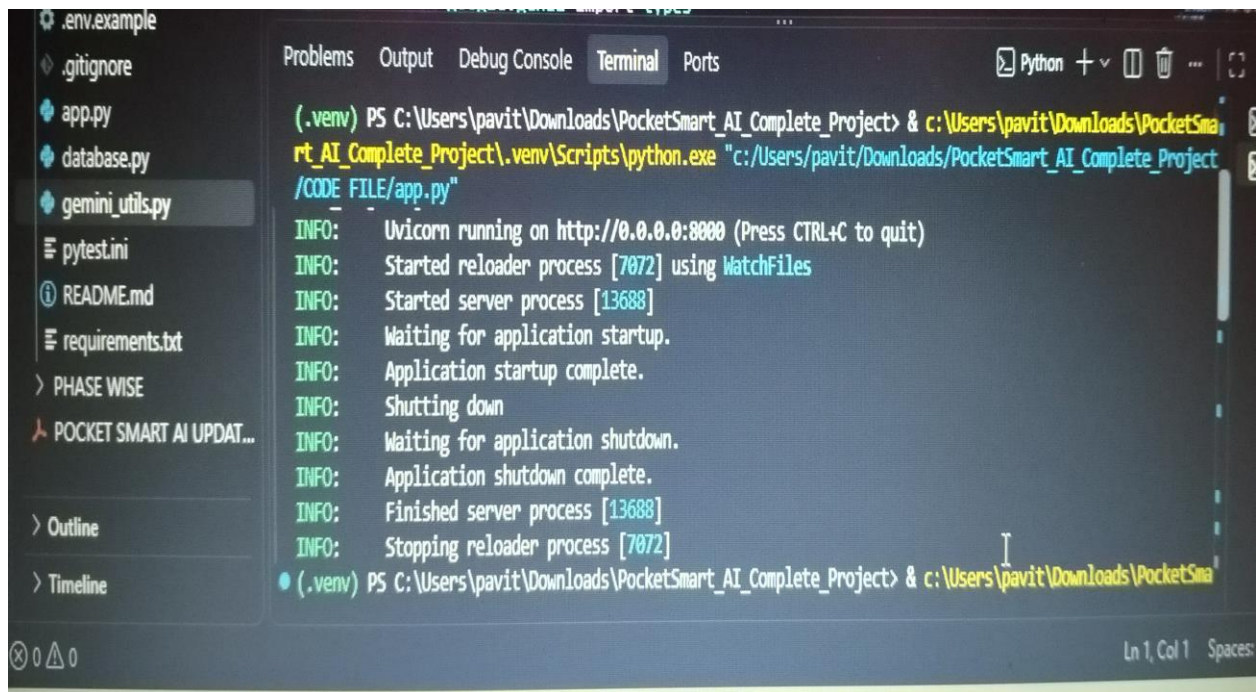

Key findings:
 Performance results are pending execution of the planned load and stress tests.

Bottlenecks Identified:
 No measured bottleneck is claimed before testing; monitor API latency, CPU and memory.

Optimization Steps Taken:
 Validate inputs and optimize heavy queries/connections after measured results are available.

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

```
