

POCKET SMART AI — Your Smart Budget & Recommendation Assistant

Phase 7: Project Documentation

St. George's Arts and Science College (UNM1727) · TN Skills | Generative AI · Team ID: SWTID-2026-2087

Team Leader: Monish B | Members: Jagadeeshwaran S, Shannon Cadric Jacob, Preethika B, Naresh S

7.1 Purpose of This Phase

This phase captures how the project is documented for submission and future maintenance: the document scope, the project's file structure, configuration documentation, and the reference links kept in the project appendix.

7.2 Document Control & Scope

Field	Detail
Project	Pocket Smart AI
Report type	Complete project report (20-part structure)
Coverage	Requirements → Design → Development → Testing → Deployment
Primary concept	Fixed-budget, multi-category planning and recommendation
Source note	Uploaded project material and supplied report format

Where an implementation detail (exact framework version, database product, hosting provider) is not established by the supplied source material, this documentation set intentionally states that rather than inventing it, and directs the reader to the project repository as the authoritative source.

7.3 Project Structure Documentation

The recommended and actual structure is documented so any team member or evaluator can navigate the codebase:

Item	Purpose
templates/	HTML templates: base, dashboard, login, register, home/party/jewelry planners, result, history.
static/	CSS, JavaScript, images, and other static assets.
config/	Environment/configuration definitions.
database/	Schema, seed data, migrations, or storage helpers where applicable.
tests/	Automated/manual test assets.
app.py	Main application entry point.
database.py	Data access / persistence helper module.
gemini_utils.py	Integration helper for the Google Gemini recommendation engine.
.env / .env.example	Environment variables and a template for required configuration keys.
requirements.txt	Dependency definition.
README.md	Project overview and setup instructions.

7.4 Configuration & Setup Documentation

Local ports, service credentials, database connection values, and API keys are documented as being kept in environment configuration (.env) rather than hard-coded in source, with .env.example provided as a template for new contributors.

7.5 Deployment Documentation

- Deployment architecture: browser → hosted web application → application logic → optional persistent storage/services.
- Documented deployment steps: prepare production configuration, install dependencies, configure environment variables, initialize storage, run checks, deploy, verify the public URL, and run smoke tests.
- Production considerations recorded: HTTPS, secured secrets, production logging, error monitoring, backup strategy, input validation, access control, and a rollback/redeployment procedure.

7.6 Appendix — Reference Links

Resource	Link
Source Code (Drive)	drive.google.com/file/d/13zc_gkjTCQu4qaq1P0pUYMY8uw1oUCE_/view
GitHub Repository	github.com/monishbm/Pocket-Smart-AI.git
Live Demo (Drive)	drive.google.com/file/d/127hGGCOFns8FGi5IUHsy_MfivP1LTfdU/view
Project Documents Folder	drive.google.com/drive/folders/1uGTrGr2nbU5G6e1khQycmfN1kxoCQuSC

7.7 Outcome of This Phase

A complete, submission-ready documentation set: scope-controlled report content, a documented file structure, configuration and deployment notes, and a consolidated appendix of source-code and demo links for reviewers.
